- Java
- ORACLE
- Html
- CSS
- JavaScript

PROJECT

- Automatic Wireless Health Monitoring System

A wireless health monitoring system, also known as a patient monitoring system or wireless Health wearables, includes remotely monitoring a patient's vital signs using devices that wirelessly communicate patient data to remote places. This system uses

sensors to measure the patient's physiological parameters, including HR, BT, BP, and SpO2.

- Credit Card Fraud Detection Using Machine Learning Algorithm

The Isolation Forest performs much better than the LOF while taking a gander at bungle accuracy and recall for 2 models. It has also been recognized that the fraud detection rate is almost 27% compared to the LOF discovery rate of only 2%. Isolation Forest has a 99.774% greater precision than 99.65% LOF.

EXTRACURRICULAR ACTIVITIES

- Member in an NGO (we are with you charitable trust)
- Participated in yoga
- Sports club
- Farming
